

Mercury: The largest risk groups

GOLD MINERS

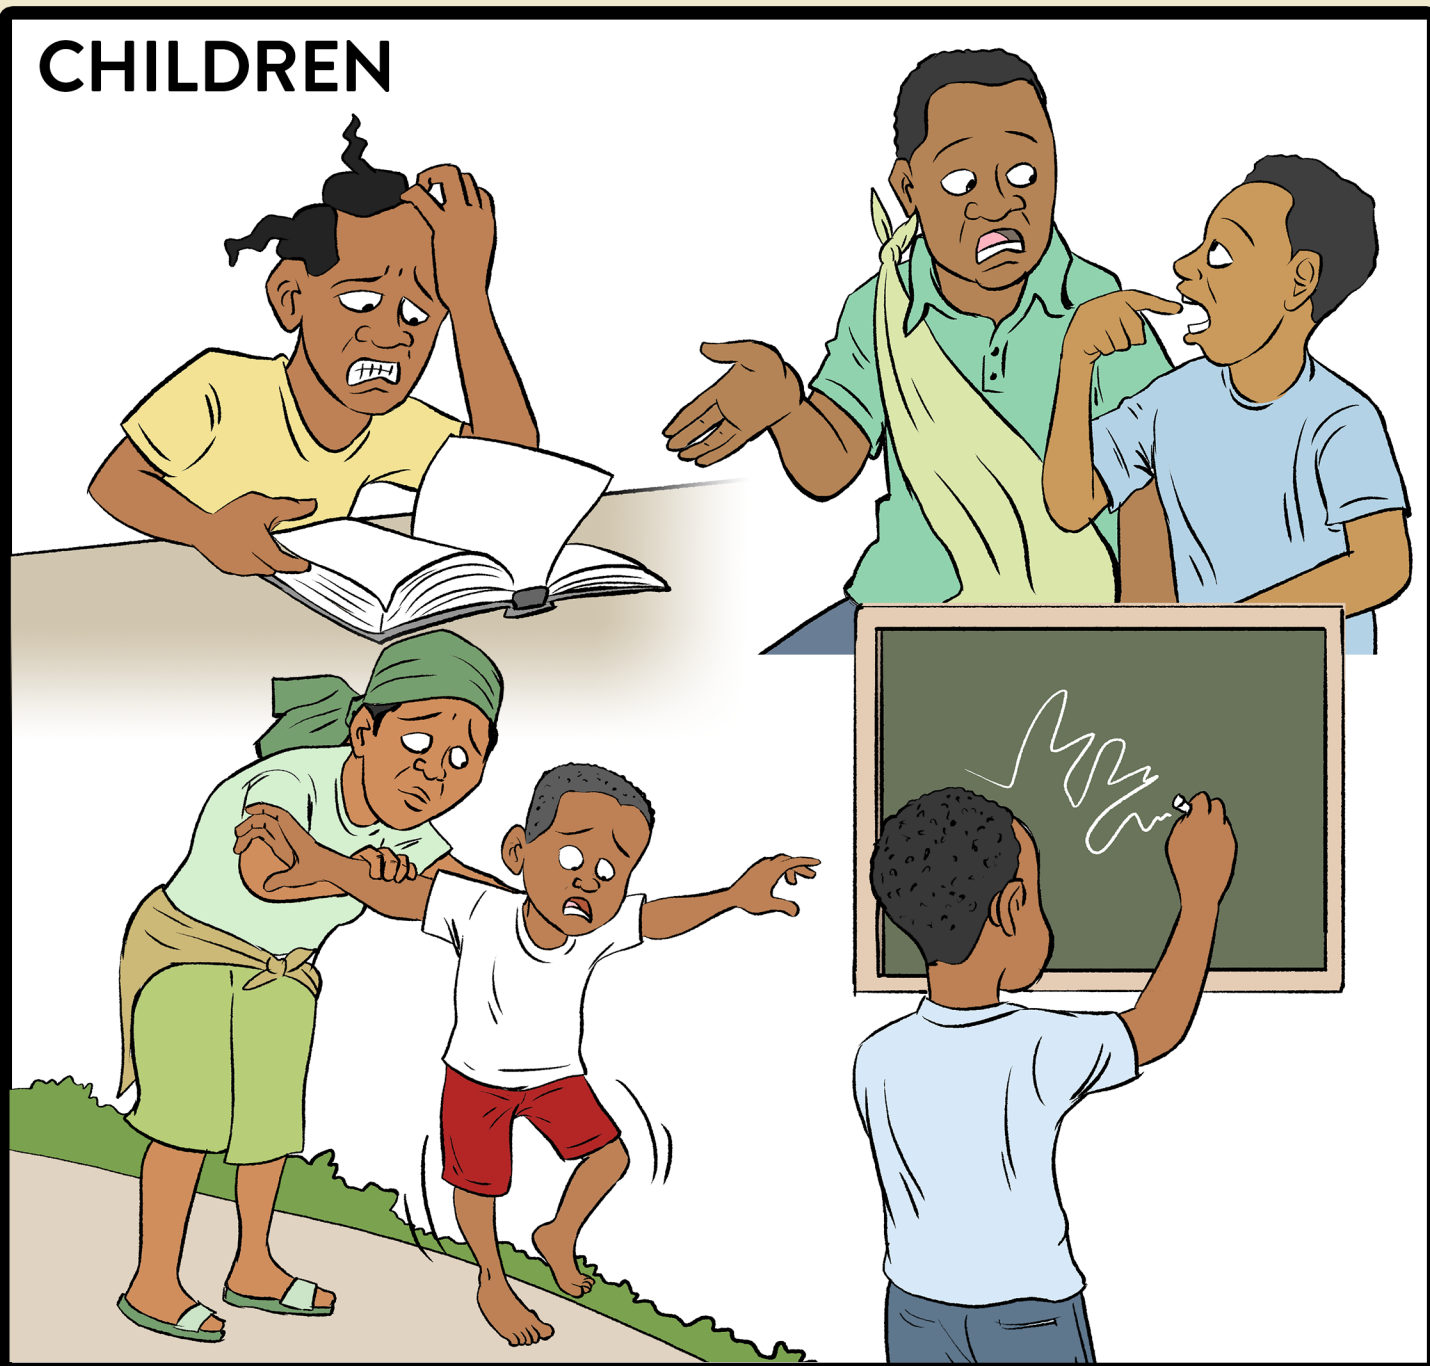

Gold miners and others who work and live around gold miners are most at risk, but there are also others from whom mercury can be dangerous.

PREGNANT WOMEN

Exposed to mercury, transmit it on to their unborn child. This exposure increase the risk of miscarriage and premature birth.

CHILDREN

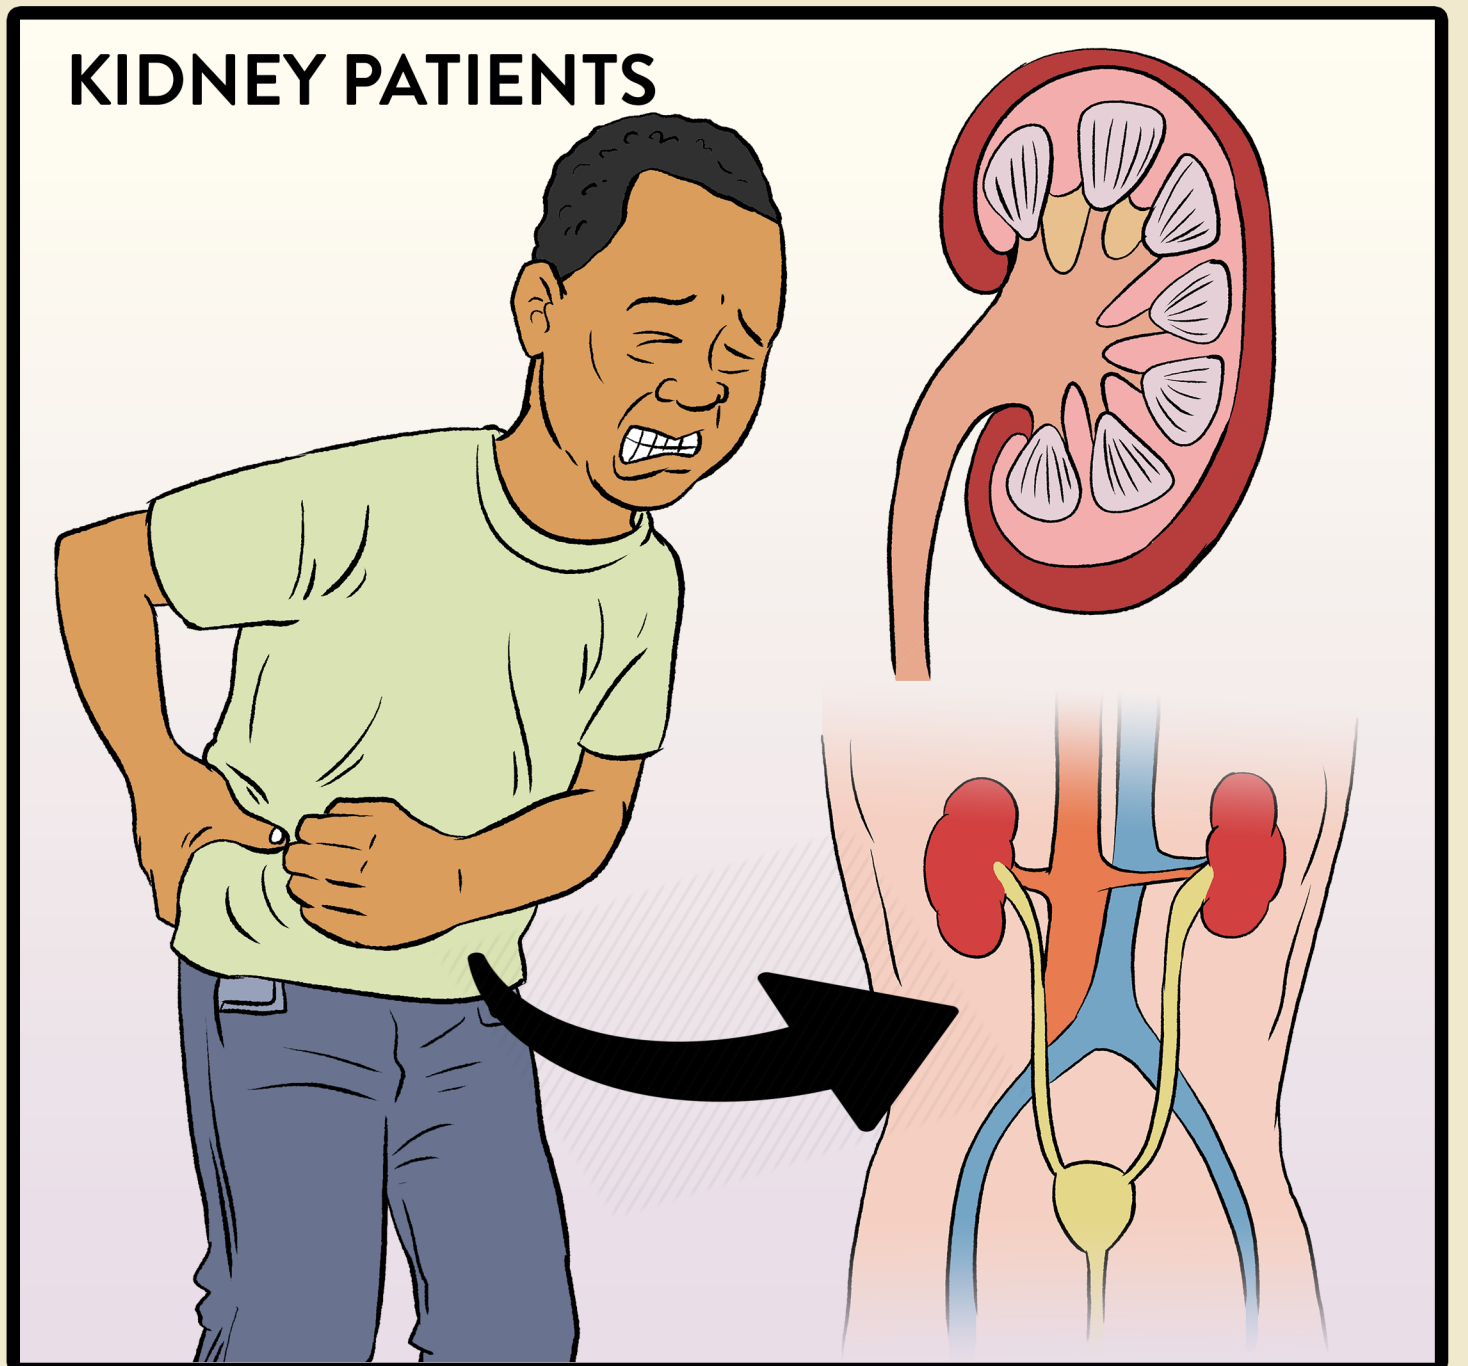

May have problems with learning, speaking, writing and walking.

Try to avoid contact with mercury as much as possible.

If you belong to one of the risk groups and have health effects, please visit the nearest clinic.

KIDNEY PATIENTS

Accumulation of mercury in the body can worsen kidney problems.
